Symbol LS3008 Review

Product: LS3008

Manufacturer: Symbol

Type: Rugged Laser Scanner

Support: Symbol provides a 3-year hardware warranty. POSGuys offers lifetime support.

The [Symbol LS3008](#) is a professional level rugged linear scanner from Symbol/Motorola. The rugged design and rasterizing scan engine make it ideal for many locations.

Typical uses and environments:

The rugged design of the LS3008 and IP54 seal make it an ideal fit in environments that are rougher than standard retail or light industrial locations. The rasterizing scan engine allows the scanner to effectively read damaged, dirty, or otherwise unreadable barcodes by creating an aggregate scan of all the "readable" locations. As such, the scanner would fit well in rough/warehouse style retail, light industrial, health care, or even standard industrial environments.

Standard Features:

The LS3008 ships from POSGuys.com with the interface cable boxed separately. This occurs because the LS3008 is designed for more industrial applications or for higher end users, who may already have the cable or may need a very specific cable to meet their needs. Thankfully, Symbol has designed the LS3008 to automatically detect which interface it is sending data to and adjust accordingly, meaning the device is plug-and-play with any interface. A goose-neck auto-sense Intellistand is available for purchase, which automatically sets the scanner into auto-sense mode for easy scanning. For increased durability, the LS3008 features rubber molding around the boot, beam hood, and beam window to prevent damage to itself and any products it may bump into.

Unique Advantages:

An IP54 seal on the LS3008 means that the scanner is resistant to windblown dust and random sprays of water. This seal means that the scanner can be wiped down without damaging the internals, excellent for health care professionals looking for an easily sterilized/sanitized scanner. The rasterizing scan engine can be set to be off, on all the time, or in a "smart" mode, where it will activate the raster mode only if it doesn't get a read within a certain timeframe. This allows the LS3008 to scan more efficiently and easily scan damaged or worn barcodes.

Performance Testing:

In testing the Symbol LS3008's capabilities, we ran it through a set of tests involving optimal scan range, ability to scan wide barcodes, dense barcodes, light resistance, and a general drop test to determine durability. Our testing determined the scanner to easily meet the needs of rough retail, warehouse, or industrial environments.

When testing wide and dense barcodes, the LS3008's performance was very standard. The scanner experienced trouble scanning barcodes wider than 8" at a standard density, but that barcode also held 60 characters, well above what would be used in industrial settings. It could scan all but the 3 and 4 mil barcodes in our density test, meaning that it will easily handle the rigors of industrial barcode scanning. For light resistance, the LS3008 was able to scan properly in standard light conditions, as well as in outdoor lights. Scanning only became intermittent in bright light, with our 250w light about 8' away.

During durability testing, our LS3008 survived the 3' and 6' drops, but experienced hand board damage on the final 13' drop. The drops were done without the interface cable attached, which we later learned reinforces the hand board. However, even with that handicap, the LS3008 survived well beyond what would normally be experienced in rough retail environments. Symbol's specifications are drops from 6.5' to concrete, thus the LS3008 exceeds those expectations.

What really gives the LS3008 an edge is its scan range. The scanner was able to scan from contact to 24" away on a standard UPC-A barcode. This range is incredible for light to medium industrial class barcode scanners and shows the great prowess of the scanner. The scan engine is also aggressive enough to read through 12 layers of regular plastic, meaning barcodes can be protected from the elements and still easily scanned.

A breakdown of the Symbol LS3008's capabilities is listed in table and graph form below.

Scanner Performance Testing

Scan Range (Depth of Field)

Incredible Scan Range
Effective to 24" away

Durability (Multiple Drop Tests to Concrete)

Above average durability
compared to class

Wide Barcodes (In Inches)

Scans well above standard
warehouse/industrial sizes

High Density Barcodes (In Mil)

Good range for warehouse retail
and industrial barcode density

Resistance to Light

Good light resistance

1D Results

Highest Density Barcode Scanned	6mil	Good
Widest Barcode Scanned	203mm	Great
Shortest Barcode Scanned	38 mm	Good
Range Ideal Conditions (Standard 100% UPC-A)	Contact – 24"	Excellent
Multiple Barcodes in close proximity	Accurate aiming, but could accidentally scan incorrect barcodes in close proximity	Average
Scan through plastic layers	12 Layers	Excellent
Multicolored Barcodes Successfully Scanned	Blue, Grey, B & W Inverse	Good
Multicolored Barcodes Not Scanned	Red, Yellow, Black on Dark Grey	Average
Simulated Sunlight Test	Correct scans until spotlight was at 8"	Good

Conclusion:

The Symbol LS3008 is an excellent intermediate step between retail-class barcode scanners and heavy industrial scanners. If you are looking for a scanner that is aggressive and durable, but at a lower price than the heavy industrial class, the LS3008 is a great choice.

Similar Products From Symbol	Ideal Setting	Description
 LS2208	All Retail, Light Industrial, Medium to High Volume Scanning	Excellent features for its price. Aggressive scan engine ensures accurate scans for all types of linear barcodes
 LS3008	Light to Medium Industrial, Rough Retail, High Volume Scanning	More aggressive scan engine than LS2208, able to enter raster mode to scan damaged barcodes. IP54 seal protects it from dust & water.
 LS3578	Heavy Industrial, Harsh Environments	Cordless barcode scanner has extended range or fuzzy logic scan engine to increase scanning ability. IP64 seal protects it from the elements.
